Expected Problem 1. If all the user interactions like Sign-Up, Sign-In, User Type selecting, Blood Type Selecting, Sending Blood Request, Checking Notifications, make sure that you are connected to the internet because the FYP is accessing database which is hosted on the cloud and the FYP need internet to make successful connection with the database for data input or output.

Expected Problem 2. If npm install --force, npm run dev and npm start commands fail, most probably it is due to missing npm software. To check whether npm is installed, open command prompt and type npm --version and press enter, if a version number is displayed then the npm installed and if not, repeat the node.js installation process again.

Expected Problem 3. If the application is taking too much time to start then, check the internet connectivity for accessibility.
